DATE OF BIRTH: 29-06-1990
CITIZENSHIP: Guyanese
MOBILE: +44 (0) 7778 490977

EDUCATION

Kingston University	Ph.D. Economics	2020 (Expected)
SOAS, University of London	M.Sc. Development Economics	2015
University of Guyana	B.Sc. Economics	2013

TITLE OF DOCTORAL THESIS: Essays in Open Economy Macroeconomics: Technological Gaps, Income Distribution and the Balance of Payments Constraint

ACADEMIC APPOINTMENTS

Senior Teaching Fellow in Economics	SOAS, University of London	2019-20
Visiting Lecturer in Economics	Academy for Pluralist Economics	2018

PROFESSIONAL AFFILIATION

IGDC Researcher	Interdisciplinary Global Dev Centre (IGDC), University of York	2018–
Coordinator	YSI Economic Development Working Group	2017–
Member	Post Keynesian Economics Society	2015–

AWARDS, FELLOWSHIPS & GRANTS

-VII LAPORDE Grant, Young Scholars Initiative/INET & Getulio Vargas Foundation	2018
-Conference Grants: University of Tampere & Young Scholars Initiative/INET	2016/17
-Ph.D. Fellowship, Kingston University	2015
-Prof. Clive Thomas Award for Best Graduating Student in Economics, Uni. of Guyana	2013

RESEARCH MANAGEMENT

–Co-PI, <i>A Critical Approach to Development Economics</i> , IGDC University of York	2018–
---	-------

FIELDS OF INTEREST

Economic Development & Growth, Open Economy Macroeconomics, Distribution, Political Economy

KEYNOTE ADDRESSES & INVITED LECTURES

-A Tribute to Sir Alister McIntyre, Institute of Intl Relations, University of the West Indies	2019
-Oil, Expectations and Crises, Moray House Trust Lecture, Guyana	2018
-Income Inequality in Guyana and Other Sister States, UNDP Lecture, Guyana	2017

DISSERTATION

“Production Structure, Capital Flows and The Short-Run—Medium-Run Macrodynamics” (JMP)

This paper contributes to the literature on technological gaps and BP constrained growth by developing a theoretical framework to account for the ambiguous effects of capital flows on economic growth. The model shows that when a technological gap exists between two countries in an EMU and exceeds a threshold, capital flows toward the laggard deteriorate its production structure and reduce its BP constrained growth rate and the reverse is true when the technological gap falls within the threshold. Moreover, when the laggard’s demand-regime is wage-led, capital inflows increase its short-run growth rate and external deficit until a financial crisis emerges and the reverse holds in a profit-led regime. Thus, capital flows within a community can produce both convergence and divergence effects. It follows that the convergence criteria must include demand-regimes and the initial size of the technological gap.

“Fiscal Policy, Distribution and BOP-Dominated Technological Change”

This paper demonstrates in a balance of payments constrained growth model that redistributive policies can lower long-run growth. Product quality is endogenously determined by technological change. Public investment in the laggard economy accelerates technical change, while lower income inequality has ambiguous effects. On one hand, lower inequality increases import demand for consumer goods and lowers the share of capital imports, which undermines technology transfer. On the other hand, lower inequality improves workers’ access to education, which enhances their ability to emulate imported technologies. When the negative effect dominates, the laggard confronts a tradeoff between lower inequality and technological convergence. Thus, income distribution must serve as a convergence criterion in EMUs.

“To Devalue or Not to Devalue? New Channels and Mechanisms”

This article incorporates the monetary economy into a post-Kaleckian model to demonstrate the dynamic effects of a real devaluation or an EMU-exit. In the short-period, contractionary effects relate to higher costs of imported capital and foreign interest payments. In the medium-term, a devaluation contracts the profit share (investment demand) and increases bankers’ rent share through three channels: 1. Higher bond rate and larger holdings of central bank securities, 2. Higher profitability of foreign assets and 3. Higher loan rate. These medium-run contractionary effects extend into the long-period, as the rate of innovation is determined by the loan rate and profit share. The article finds that the effects of a real devaluation depend on the degree of competition in the banking sector, the size of banks’ foreign assets- and loan-capital ratios and whether oligopoly banks are trapped in a regime of excess reserves.
